CC Algebra Review Homework

	Boys	Girls
Pancake	31	34
Waffle	36	44
Biscuit	18	26

Solve each quadratic (factoring, quadratic formula or completing the square).

$$x^2 + 5x = 24$$

$$x^2 + 5x - 24 = 0$$

$$(x+8)(x-3) = 0$$

$$x = -8 \quad | \quad x = 3$$

Use the functions

$$f(x) = x^2 + 2x + 5$$

$$g(x) = 5x - 1$$

for the following:

a) $f(x) + g(x)$

$$\begin{array}{r} x^2 + 2x + 5 \\ + 5x - 1 \\ \hline x^2 + 7x + 4 \end{array}$$

b) $g(x) - f(x)$

$$(5x-1) - (x^2+2x+5)$$

$$5x-1-x^2-2x-5 = -x^2+3x-6$$

c) $g(x)^2$

$$(5x-1)^2 = (5x-1)(5x-1)$$

$$25x^2 - 5x - 5x + 1 = 25x^2 - 10x + 1$$

What % of everybody that was surveyed were Girls? $\frac{104}{189} = 55\%$

How many people chose waffle as their favorite? $80/189$

How many more girls liked pancakes than girls who liked biscuits? 8

What percentage of the boys liked pancakes? $\frac{31}{85} = 36\%$

What percentage of the people who liked pancakes were boys? $\frac{31}{189} = 16.4\%$

Solve the system

$$\begin{array}{r} 8x - 8y = -8 \\ -8(x - 3y) = 13 \end{array}$$

$$\begin{array}{r} 8x - 8y = -8 \\ -8x + 24y = -104 \\ \hline 16y = -112 \\ y = -7 \\ x - 3(-7) = 13 \\ x + 21 = 13 \\ x = -8 \end{array}$$

Write a simplified expression for the area of the shaded region below

$$(2x+3)(x-4) - (x+1)^2$$

$$(2x^2 - 5x - 12) - (x^2 + 2x + 1)$$

$$2x^2 - 5x - 12 - x^2 - 2x - 1$$

$$x^2 - 7x - 13$$

A researcher is researching the number of minutes waiting in line (x) versus the number of people ahead of you in line (y) at a local amusement part. She derives the equation $y = 4.36x + 11.49$ to model this relationship. What does the 11.49 and the 4.36 mean in the context of the problem?
